

# FreeNAS - ZFS for Home and Office

Aaron Poffenberger

2015-08-22 Saturday

FreeNAS<sup>®</sup>

# Outline

- 1 Introduction
- 2 What is FreeNAS?
- 3 UI Walkthrough
- 4 Why FreeNAS Rather than \$NAS
- 5 Conclusion
- 6 Resources
- 7 License and Credits

# Introduction - Background

- Software developer
  - 17+ years professionally
  - 30+ otherwise
  - Security software
  - Design and implement secure APIs
- IT Background
  - Boeing Aerospace Operations
  - ISP (dial-up land)
  - Consulting
- Software Development
  - PentaSafe Technologies
  - NetIQ
  - TheAnimenetwork.com
  - BRS Labs
- CISSP 2005+
- BSD user
- Amateur radio enthusiast

# What is FreeNAS

- An appliance distribution of FreeBSD focused on Network Attached Storage
- Open source — Free as in beer and free as in speech.

# Features

- Replication
  - Time Machine
  - Windows Backup
  - rsync
  - PC-BSD Life Preserver
- Encryption
  - Volume encryption (FreeBSD geli)
  - Uses AES-NI when available
- Snapshots
  - ZFS snapshots (more later)
- File Sharing
- Web UI
  - Console and ssh access as well
- Plugins
  - Open specification

# Features - System Services

- File services in base:
  - Appletalk (netatalk)
  - CIFS (samba 4.x)
  - Domain controller (samba 4.x)
  - Dynamic DNS
  - FTP
  - NFS
  - rsync
  - WebDAV
- Appliance and server services:
  - S.M.A.R.T.
  - ssh
  - tftp
  - UPS (nut)
- Somewhat unexpected:
  - iSCSI
  - LLDP

# Plugins

- bacula (server)
- couchpotato
- gamez
- maraschino
  - XBMC overview page
- mylar
  - comic book downloader
- sabnzbd
- Transmimssion
  - BitTorrent client
- BitTorrent Sync
- CrashPlan
- htpc-manager
- minidlna
  - DLNA server
- ownCloud
- plexmediaserver
- sickbeard
  - PVR for newsgroups
- 3rd Party

# Plugins

The screenshot shows the FreeNAS web interface for managing plugins. The top navigation bar includes icons for Account, System, Tasks, Network, Storage, Directory, Sharing, Services, Plugins, Jails, Reporting, Wizard, Guide, and Alert. The left sidebar lists system components, with 'Services' expanded to show 'Control Services' and 'Rsync' modules. The main content area is titled 'Plugins' and has tabs for 'Available', 'Installed', and 'Configuration'. The 'Installed' tab is active, displaying a table of installed plugins. The table has columns for Plugin name, Version, PBI, Jail, Service status, and Actions. One plugin, 'Owncloud', is listed with version 8.0.3, PBI 'owncloud-8.0.3-amd64', and is installed in the 'owncloud\_1' jail. Its service status is 'OFF', and it has 'Update' and 'Delete' buttons. At the bottom, a log shows configuration reload requests.

# Reporting

# Alerts

# Why FreeNAS?

- Jails and ZFS

# Jails

- Not mentioned as a feature of FreeNAS but integral
- Core to plugin-functionality
- Not limited to plugin architecture
- What are jails?

# What are Jails?

- Process isolation:
  - Full OS
  - Separate network stack
  - Own users and groups (including root)
  - Own processes
  - Unable to access other jails outside of normal network access
- More than just chroot
- Lighter than full OS virtualization
- One kernel to rule them all...
- Very mature, appearing in FreeBSD 4.0
- Similar to Solaris Containers
- More than a Docker container

# Jails in FreeNAS

- Used for plugin-architecture
- Each plugin runs in a jail
- One ipv4 address per jail
- Neat, clean separation between each plugin
- Yes, you can run docker-images in a FreeNAS jail
  - <http://www.freenas.org/whats-new/2015/07/docker-done-right.html>
- <http://www.freenas.org/whats-new/2013/04/freenas-plugins-everything-you-ever-wanted-to-know.html>

# What is ZFS?

- Not mentioned as a feature of FreeNAS but integral
- Combined file system and logical volume manager
- Focused on:
  - Data protection
  - High (insane) storage capacity
  - Efficient data compression
  - Continuous integrity checking and repair
  - RAID-Z layouts
  - Native CIFS, NFS and ACLs
- Originally ZFS as in Zettabyte File System
- Now ZFS as in "last" file system (you'll need)
- Cross platform
  - <http://open-zfs.org>

# What is ZFS? - Features

- Data Datasets
  - Partition and mount-point management
  - Snapshot target
- COW - Copy On Write
- Snapshots
- Metadata
  - Data about the dataset
  - User can create metadata
- RAID (0,1,10, RAIDZ[1-3])
  - RAIDZn - number of disks for parity
  - Hotswap (AHCI or other hotswap hardware)
- Replication
  - zfs end | receive
  - Save/restore to/from file
- File-backed devices

# Snapshots - So What?

- Exact replica of file table at moment in time
- Nearly instantaneous, even for large data sets
- Recursive
- Enabled by COW -Block-level changes only
- Conceptually similar to a diff
  - More flexible since block level
  - ZFS doesn't need to know file format
- Can be aged out (using cron)

# ZFS in FreeNAS

- Heart and primary differentiator of FreeNAS
- Used for drive and volume management
- Snapshots
- Key part of jails

# Is FreeNAS for Home Use?

- Yes! And business, SOHO to Enterprise
- Numerous sites with servers in the 100s of TBs
- Houses like mine
- FreeNAS forums chock-a-block with home and SOHO users talking about ITX-based systems

# Hardware (Minimum) Requirements

- Multi-core 64-bit processor
- 8 GB boot drive
  - Thumb drives welcome, encouraged
- 8 GB of RAM
- At least 1 storage disk
  - Multiple strongly encouraged
- FAQ
  - Doesn't ZFS require ECC RAM.
    - No. ECC helps with data integrity in the data center
    - Nice to have
  - I heard I need 32 GB+ of RAM. Do I?
    - 32 GB+ is nice because you get more read-caching
    - 8 GB is enough

# Questions

- Questions - You have them, I may have answers
